accessories

The safety of food contact materials must be ensured as chemicals can migrate from the materials into the food. The materials must be manufactured in compliance with regulatory regulations, including good manufacturing practices, to prevent any potential transfer to foods does not raise safety concerns. Change the composition of the food in an unintended way or have adverse effects on the taste and/or color.

Soft touch coatings make characteristic surfaces, such as those of many plastics and rubbers, appealing to customers. These coatings can be formulated to feel rubbery & velvety to positively differentiate from the competition.

By drinking water from a BPA-free water bottle, you are eliminating a main source contributing to high levels of BPA in your body. For improved health and to reduce the risks of the health effects above, we recommend using BPA-free water bottles.
